

The plasterboard plug 'ARROW' metal is ideal for installation in plasterboard (max. board thickness = 12.5 mm). It is simply driven in with a hammer. Its centring tip enables precise positioning at the desired point and the internal thread guide ensures a secure hold of the screw thread. It is recommended to use chipboard screws. When the screw is screwed in, the plug expands, anchoring itself to the back of the building material and thus providing a secure hold.
